

Washing powder automatic quantitative feeding machine Model:LBT-DA9

Instrument functions

The automatic quantitative feeding machine can set the powder dosage according to test requirements. When connected to a washing machine, it automatically dispenses the quantified detergent powder into the washing machine. It perfectly solves the tedious problem of manually weighing and adding detergent powder during the washing process, especially the difficulty in manual detergent addition during multi-cycle washing procedures.

Applicable models

WASCATOR FOM71 CLS, LBT-M8, LBT-M6, YGB series and other European standard and national standard washing machines

Product features

- ◆ Washing powder quantity set freely;
- ◆ Large capacity powder cartridge, avoid frequent addition of detergent powder;
- ◆ Quantitative precision calibration, to avoid different types of detergent filling quantitative deviation;
- ◆ Online automatic quantitative adding powder, no manual intervention;
- ◆ Touch screen operation, man - machine interaction is superior;
- ◆ Compact and lightweight, suitable for various types of washing machines, directly placed on the top for use;
- ◆ Touch screen display record the number of power adding.

Technical parameters

Adding powder quantitative accuracy	± 1.0 g
Powder cartridge capacity	600 g
Maximum powder quantity in a single does	Customization
Power supply	AC 220V / 50Hz / 100W
Dimensions	L 589mm × H 223mm × W 252mm
Weight	12.5 kg
